/ High Performance

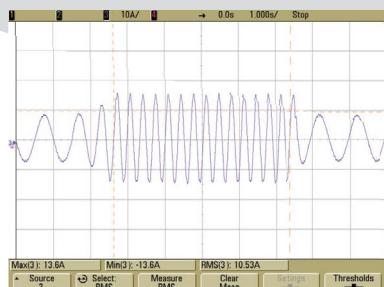

- More Accurate Motor Auto-tuning

Accurate rotating and static motor auto-tuning
Convenient debugging and easy operation

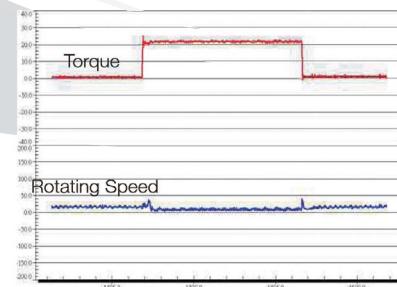

Rotating auto-tuning	Static auto-tuning
Need to separate the load Applied in situation when high control accuracy is needed	Need not separate the load Applied in situation when load is difficult to separate

- Advanced open loop vector control

Current, torque and rotating speed waveforms when sudden loading or unloading in asynchronous motor open loop vector control mode with 0.5Hz running frequency and full load.

Current

Torque & Rotating speed

- Perfect voltage and current control, reducing the fault protection times

OC fault

Adjust the output frequency to avoid overcurrent of the inverter during acceleration

OV fault

Adjust the output frequency to avoid overvoltage of the DC bus during deceleration

- Multiple braking modes and instant stopping

Dynamic braking

- Configure braking units and resistors
- Available on the situation of big inertia load and frequent braking
- Big braking torque and quick braking

Flux braking

- No need to configure braking units and resistors
- Available on the instant stopping situation with big inertia load and no frequent braking
- Not available on the situation of big inertia load and frequent braking (the energy consumed on the stator and its cooling is better than DC braking)

DC braking

- No need to configure braking units and resistors
- Available on the situation when start the running motor after braking and the situation when keep the moment output after braking to zero speed
- Not available on the situation of big inertia load or instant stopping braking in high speed running

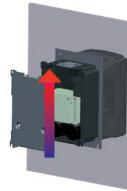

Short circuit braking

- No need to configure braking units and resistors, capable of braking quickly
- Applicable to the motors at quick start and stop or restart after braking
- Not applicable to big inertia load and frequent braking

/ Multi-Function with Simple Operation

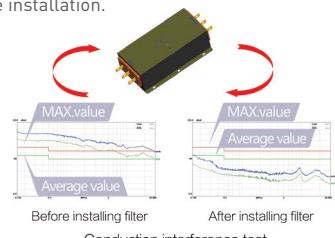

- Separate Air-duct

The separate air duct prevents the contaminants into the electronic parts/components and greatly improves the protective effect of the inverter, as well as its reliability and service life, to adapt various complicated site environments. It can also facilitate the heat-releasing in control cabinets and the heat-releasing design of the customer.

- Standard built-in C3 input filters, optional external C2 filters

C3 input filter is embedded in the factory to meet different application requirements, save installation space and avoid electromagnetic interference caused by incorrect selection and site installation.

Remarks:
C2 filter: EMC performance of the inverter achieves the limited usage requirement in civil environment.
C3 filter: EMC performance of the inverter achieves the limited usage requirement in industrial environment.

- The rivet design ensures reliable integration connection

Greener Proper grounding
Stronger corrosion-resistance Excellent EMC performance

- EIS Series

Membrane keypad design (which can be connected to external keypads) is available for inverters ($\leq 15\text{kW}$); swappable keypads are standard for inverters ($\geq 18.5\text{kW}$)

- Multiple installation modes

0.75~200kW: Wall mounting and flange mounting
200~315kW: Wall mounting and floor mounting
350~500kW: Floor mounting

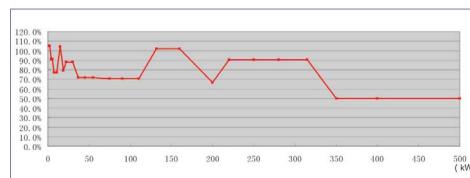

- Book structure

Parallel installation
Smaller installation space with less cost and beautiful appearance.

- Smaller size

Due to the thermal simulation and advanced modularized design, the size of our product is reduced greatly. The width ratio between EIC Series and EIS Series is shown in the figure below (the Max. percentage is 50%)

- Abundant terminals

Terminals	Quantity	Features	
Digital input	8 channels	1KHz	NPN and PNP
High speed Pulse input	1 channel	50KHz	NPN and PNP
Analog input	2 channels	0~10V,0~20mA, -10V~+10V	
Digital output	1 channel	Max. output frequency:1KHz	
High speed Pulse output	1 channel	Max. output frequency:50KHz	
Analog output	2 channels	0~10V,0~20mA	
Relay output	2 channels	3A/250VAC, 1A/30VDC, NO+NC	

- High Performance Keypad

External LED keypads are standard for inverters ($\geq 18.5\text{kW}$) to support parameters upload and download, the maximum external length is 200m and the keypads have digital potentiometers; external keypads are optional for inverters ($\leq 15\text{kW}$).

External keypad

LCD keypad

The optional external LCD keypad supports parameters loading and unloading with English.

- Available on DC power supply

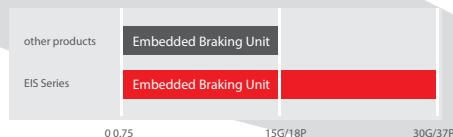

Reduce the occupied space and decrease the costsign of the customer.

Motor

- Embedded braking units of 0.75-30kW inverters

Reduce the occupied space and decrease the costsign of the customer.

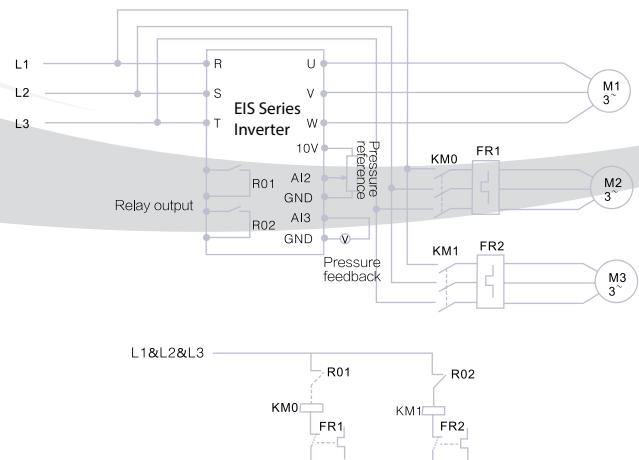

- Supporting common DC bus

Reduce the power lost on DBR
Note the impact current and the capacity of the input AC system

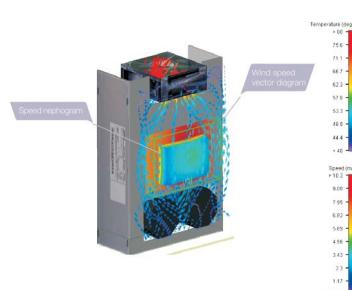

- Function of water supply

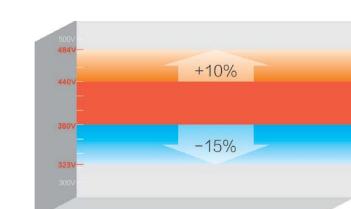

In the diagram above, M2 and M3 are auxiliary motors which are controlled by R01 and R02. PID constant-pressure automatic control system is formed by the inverter through pressure feedback. The pressure reference can apply analog or keypad input. Modbus RS-485 communication is also supported.

- Advanced thermal technology makes exact thermal design

- Wide voltage range meets the requirement of grid environment

AC 3PH:380V(-15%)-440V(+10%) Wide voltage range

/ Applications

Air compressor

Oil industry

Warming and water supply

Plastic machine

/ Technical Specifications

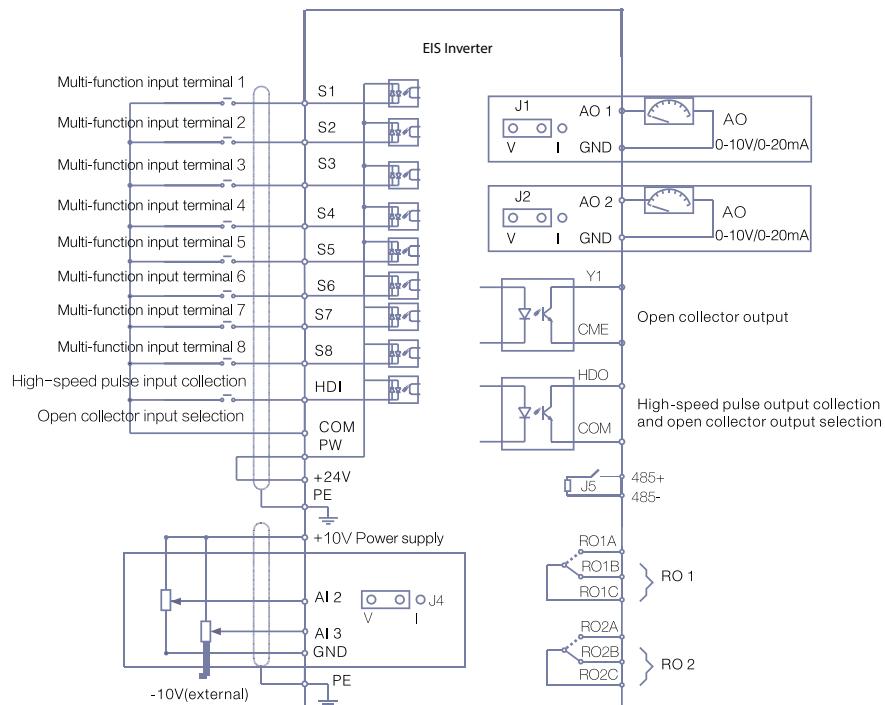

Function		Illustration
Input	Input voltage (V)	AC 3PH 400V±15%
	Input current (A)	Refer to the rated value
	Input frequency (Hz)	50Hz or 60Hz Allowed range: 47~63Hz
Output	Output voltage (V)	0~input voltage
	Output frequency (Hz)	0~400Hz
Technical control feature	Control mode	V/F SVC
	Motor type	Asynchronous motor
	Speed ratio	Asynchronous motor 1:100
	Overload capability	G type: 150% of rated current: 1 minute 180% of rated current: 10 seconds 200% of rated current: 1 second P type: 120% of rated current: 60 second
Running control feature	Frequency setting	Digital setting, analog setting, pulse frequency setting, multi-step speed running setting, simple PLC setting, PID setting, MODBUS communication setting, PROFIBUS communication setting. Realize the shifting between the set combination and set channel.
	Auto voltage adjustment	Keep a stable voltage automatically when the grid voltage transients
	Fault protection	Provide over 30 fault protection functions: overcurrent, overvoltage, undervoltage, overheating, phase loss and overload, etc.
	Speed tracking	Restart the rotating motor smoothly
Peripheral interface	Terminal analog input resolution	≤10mV
	Terminal switch input resolution	≤ 2ms
	Analog input	2 channels [AI1, AI2] 0~10V/0~20mA and 1 channel [AI3] -10~10V
	Analog output	2 channels [AO1, AO2] 0~10V/0~20mA
	Digital input	8 channels common input, the Max. frequency: 1kHz 1 channel high speed input, the Max. frequency: 50kHz
	Digital output	1 channel high speed pulse output, the Max. frequency: 50kHz; 1 channel Y terminal open collector pole output
Others	Relay output	2 channels programmable relay output R01A NO, R01B NC, R01C common terminal R02A NO, R02B NC, R02C common terminal Contactor capacity: 3A/250VAC,1A/30VDC
	Mountable method	Wall, flange and floor mountable
	Temperature of the running environment	-10~50°C , derate above 40°C
	Ingress protection	IP20
	Cooling	Air-cooling
	Braking unit	Built-in braking unit for below 300G/370P (including 300G/370P) Optional External braking unit for others
	Braking resistor	External braking
EMC filter		Built-in C3 filter Optional external filter

/ Optional Parts

- Flange mounting panel

Needed for 007G-300G/370P inverter
not needed for 370G/400P-200KG/220KP

- Installation bracket for the keypad

Installation bracket or M3 screw can be used in the installation of external keypad.
The bracket of 007G/300G/370P inverters is standard.
The bracket of 370G/450P/500KG inverters is optional.

- LCD keypad

10 rows of high definition displaying
Compatible with the LED keypad

- Filters

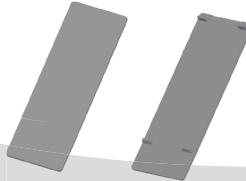

- Installation base

Only optional in 220KG/250KP-315KG/350KP inverters.
Its bases can be built in an input AC (or DC) reactor or an output AC reactor

- Heat-releasing hole

Inverter needs to derate when selecting a cover consult with the Euro technicians for the detailed information.

- AC single-phase 220V input auxiliary power supply

- Reactor

The inverters of 370G/450P and above can be connected with external DC reactor. The reactor can improve the power factor and avoid damage to the rectifier bridge caused by overcurrent and damage to the rectifier circuit by harmonic

- Braking system

The 380V inverters <300G/370P and 220V inverters <150G are build-in braking unit for standard, the others are external braking unit for optional, please choosing the resistor and power of braking resistor for site situation (require of braking torque and amount).

Braking resistor can increase braking torque of inverter, in the table it designs the resistor power according to 100% braking torque, 10% braking count, 50% braking count, 80% braking count; and customers can choose braking system according to specific process and work condition.

Inverter model	Braking unit model	100% braking torque fit braking resistors (Ω)	Power of braking resistor(kW) (10% braking count)	Power of braking resistor(kW) (50% braking count)	Power of braking resistor(kW) (80% braking count)	Allowing minimum braking resistor(Ω)
